

# EBI Project Generator

## 1 WHAT'S CHANGED?

---

The **EDI Project Wizard** has been completely revamped and is now called the **EBI Project Generator**. This now works with non-EDI Projects and helps the EBI user quickly create new projects off of already existing projects.

The **EBI Project Generator** replicates the template Project and its resources, updates new resource names, re-configures enveloping and trading partner information (for EDI Projects), maintains resource dependencies, and updates other attributes and values to automatically reflect the newly generated Project.

## 2 EBI PROJECT GENERATOR

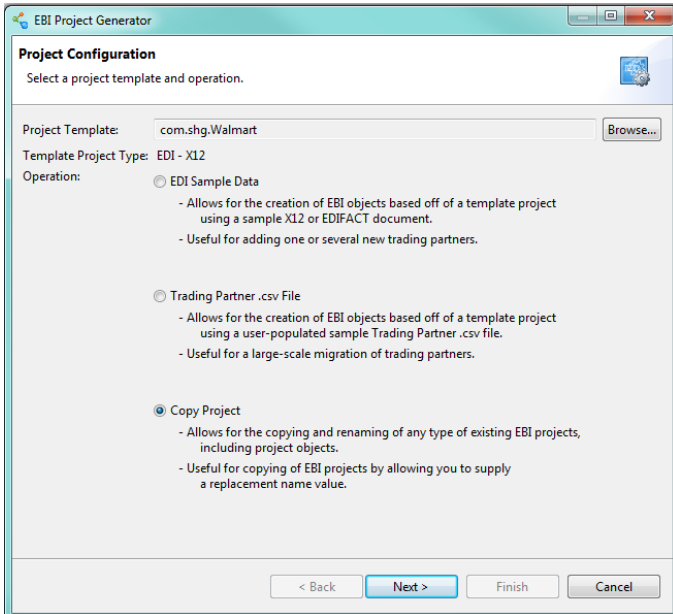

---

To begin using the EBI Project Generator, right click on the project to be used as a template. Then select **EBI Project Generator**.

### 3 COPY PROJECT

For this example, the EBI user will be using the **Copy Project** feature of the **EBI Project Generator**. Once selected hit **Next**.

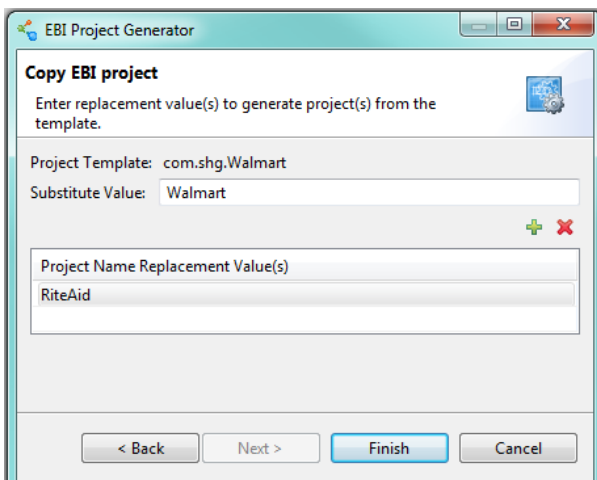

### 4 REPLACEMENT VALUES

On the next window the EBI user will need to specify the project name replacement value. For this example, **Acme** will be replaced with **RiteAid**.

Make sure **Acme** is in the **Substitute Value** box.

Next hit the green plus sign to add the replacement value, **RiteAid**.

Click **Finish**.

## 5 NEWLY COPIED PROJECT

---

When finished, the newly copied project will appear in the workspace. Anywhere the word Acme was referenced, it was replaced with RiteAid.
